

Assumptions and choices:

A person can be an actor, a director, both or neither.

An actor or director must be a person.

Table nicknames -> nickname and person id must be unique pairs, so that a person can't have the same nickname multiple times.

Table participates_in -> actor ssid and series title must be unique pairs, so that an actor can't get paid and participate in a series more than once.

An episode must have both a series and director

Episode -> name and series title must be unique pairs

The payment attribute can be put on the episode entity since an episode only has one director
